

Installation Manual

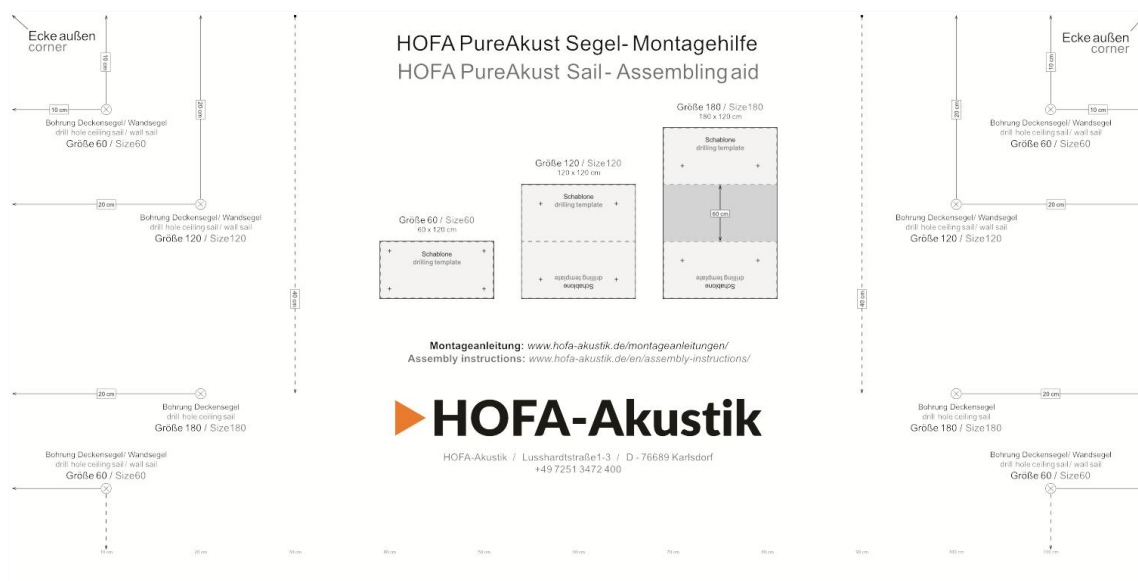

HOFA Wall Sail with PureFix 40 and 90 mm

Accessory Parts:

Distance Piece		1 per holder
Screw Magnet		1 per holder
Wall Bearing		1 per holder
Retention Plate		1 per holder
Large Screw		1 per holder
Small Screw		2 per holder

Mounting Accessories:

Drilling Template:

General Information:

We recommend that two people carry out the installation. Secure fastening and the correct choice of screws and wall plugs always depend on the condition of the wall or ceiling and can only be correctly assessed on site. If in doubt, please consult a tradesperson.

For trouble-free installation, the surface should be as even as possible. Woodchip wallpaper is normally not a problem. On very uneven surfaces, such as natural stone, for example, Installation with the optionally available adjustable telescopic brackets is recommended.

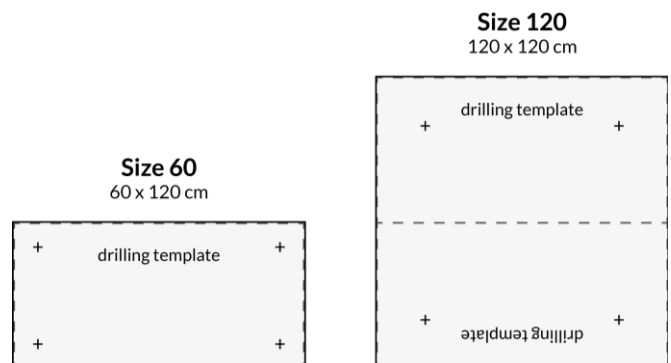

If you have any questions during the installation of the system, please do not hesitate to contact us by phone or e-mail: <https://hofa-akustik.de/en/kontakt/>

Tools and Equipment Required:

- Drilling machine with drill bit
- Screwdriver with cross bit
- Drilling template HOFA Wall Sail
- Spirit level/measuring tape
- Depending on the surface (additionally): mounting adhesive for gluing in the dowels

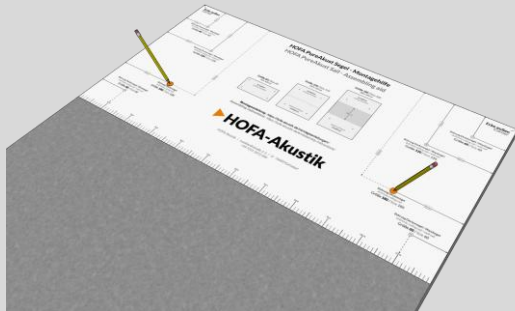

Drilling Template HOFA Wall Sail:

- Depending on the size of the HOFA sail, the template must be rotated and moved. The value can be found on the template..
- Use suitable adhesive material such as strong adhesive tape or adhesive putty to attach the drilling template..
- Assembly is much easier with the help of a second person.

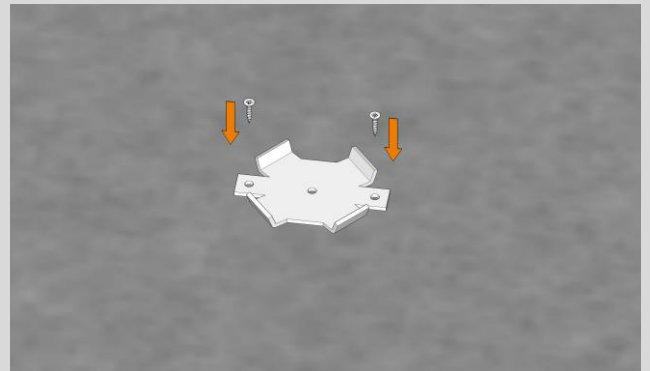

Mounting Steps for Installation

1. Position the drilling template

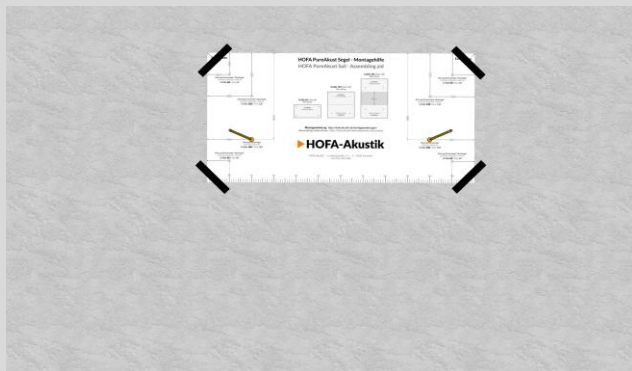

Place the template on the corners of the HOFA wall sail as shown above and mark the drilling points. Repeat the step for the opposite points of the wall sail.

2. Screw plate onto sail

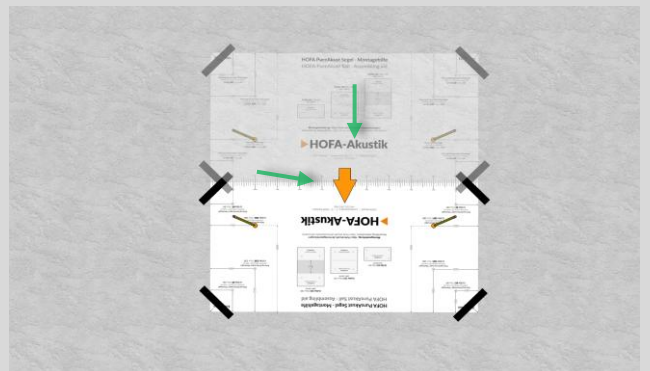

Now screw the metal plate of the mounting system onto the marked drill points on the wall sail.

3. Attach the template to the wall

With a second person, attach the drilling template to the wall with some tape or adhesive putty. Then mark the first drilling points and draw a guide line at the bottom edge.

4. Rotate the template (Wall Sail 120 cm)

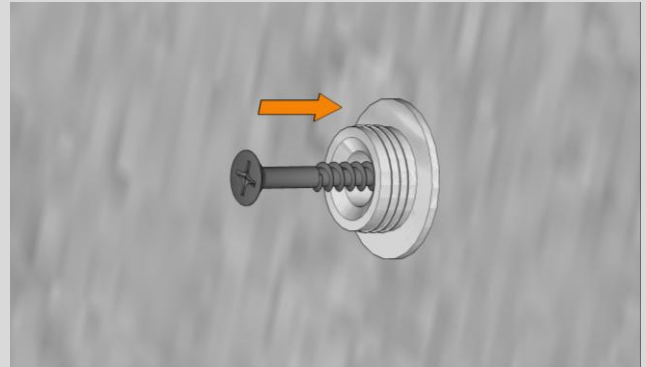

Only for Wall Sail 120: For the drill points on the opposite half, turn the template, attach it to the new position and mark the last drill points.

5. Drilling

Now drill holes and insert suitable dowels.

6. Screw on the wall plate

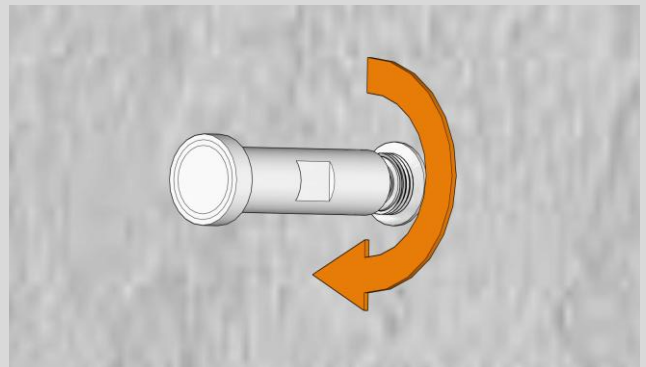

Screw the wall bracket into the prepared dowel.

7. Attach magnets to the Distance Piece

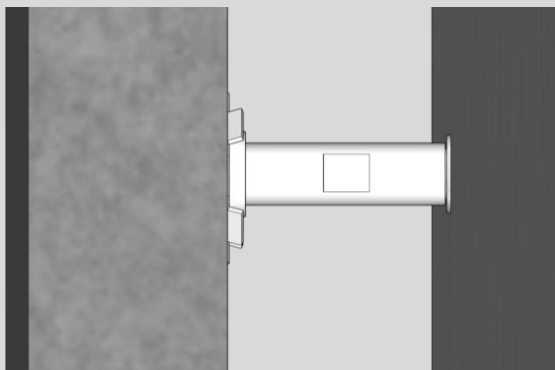

Screw the magnet into the distance piece.

8. Screw on PureFix

Screw the connecting sleeve with distance piece and magnet onto the wall plate.

9. Attach Wall Sail

Now attach the Wall Sail to the magnetic holders.

Done! Finally, carefully check the system for stability.

Cleaning Instructions:

- For plasterboard walls, wall plugs are required, which are not included in the scope of delivery.
- The load-bearing capacity of the wall should be checked before installation.
- We do not provide any guarantee if the wall cannot bear the weight.

Care Instructions:

- For dust or small dirt particles, please use a feather duster or vacuum cleaner.
- Light stains can be wiped off with a soft sponge and a little mineral water.
- For moderate soiling, a little upholstery cleaner can also be added to the soft sponge.
- For stubborn stains, apply bleach to a soft sponge and gently rub the sail. Then clean with mineral water.

When selecting the appropriate cleaning agent, ensure that it is colour-neutral (white or transparent). If possible, test the cleaning agent on an inconspicuous area and not on the visible side.
